1. Membuat folder setting dan membuat file di dalam folder app

2. membuat hello setting di page.tsx

```
app > (dashboard) > [storeId] > (routes) > settings > page.tsx > default
1  const SettingsPage = () =>{
2      return(
3          <div>
4              Hello Settings
5          </div>
6      )
7  };
8
9  export default SettingsPage
```

3. membuat sign-in

```
interface SettingsPageProps {
  params: {
    storeId: string;
  }
};

const SettingPage: React.FC<SettingsPageProps> = async ({
  params
}) =>{
  const { userId } = await auth();

  if (!userId) {
    redirect ("/sign-in");
  }
}
```

4. membuat folder components dan membuat file settings-form.tsx

5. Menampilkan halaman yang memiliki tata letak vertikal dengan menggunakan flexbox.

```
return (
  <div className="flex-col">
    <div className="flex-1 space-y-4 p-8 pt-6">
      <SettingsForm initialData={store}/>
    </div>
  </div>
)
```

6. menambah program pada settings- from.tsx berfungsi untuk menampilkan atau memproses data terkait pengaturan (settings).

```
page.tsx M  settings-form.tsx M X  page.tsx (Working Tree) M ●
app > (dashboard) > [storeId] > (routes) > settings > components > settings-form.tsx > SettingsFrom
1  "use client";
2
3  import { Store } from "@prisma/client";
4
5  interface SettingsPageProps {
6    |   initialData: Store;
7  }
8
9  export const SettingsFrom: React.FC <SettingsPageProps> = ({
10    |   initialData
11  }) => {
12    |   return (
13    |     <div>
14    |       Settings From
15    |     </div>
16    |   );
17  };
```
